- HTML, CSS (SCSS), Tailwind
- JavaScript (ES6), TypeScript
- React, Next.js, Redux-Toolkit, Rest API, SWR, Google sheets
- UI/UX Design Principles
- Framer motion

#### Docker

#### Back-End development:

- Node.js,
- Express.js,
- RESTful APIs,
- Payment services
- MongoDB, Nest.js

## Language

English - B2

Polish - B1

Ukrainian - C2

Russian - C2

# ARTYOM KALASHNIKOV

## Fullstack Developer

### 👤 Profile

Hello! I'm Artyom, a 18 year old web developer with a passion for technology and life beyond the screen. I have helped with a variety of projects, ranging from online digital stores to large-scale subscription services for platforms like Spotify and Netflix. My expertise is about payment processing and full-stack development, with notable projects like "Firework Store", "TGSPAM (Telegram Spamming Service)", "Car Transfer," "Merch Store for Selling Clothing" Personally I created Discord clones as a part function. In my free time, I am an avid basketball fan, and I enjoy playing regularly. I love exploring new places and experiencing different cultures through travel. Besides, I love playing chess.

### Work Experience

2023

-

2024

- Developed a Discord clone (in progress) [Source code](#).
- Created a service for selling subscriptions to streaming services. This turned out to be one of the most complex projects I have ever had to deal with, as the logic behind creating the products was quite detailed and well thought out. For example, each product option had a price associated with it. So, I needed to work on a database structure that could properly implement such properties and their variants. In addition, each service required its own specific fields to place an order: some required entering your account login and password, some simply required activating a code. Also, all this is integrated into Google Sheets with dynamic data rendering. Also, there is integrated payment with a webhook. [Telegram Bot](#). [Source code](#).
- Developed TGSPAM for Telegram spamming service (in progress) [Web App](#). [Source code](#)
- Designed landing pages for studios and trading companies [Studio Landing](#), [Clay Sculpting](#), [Chinese Trading Company](#).
